

**Preliminary Scholastic Aptitude Test (PSAT)  
Three year utilization and average performance - Grade 8**

The analysis and depiction of the data indicates an increase in the total student averages year over year for the past three (3) years. As to be expected, there was a decrease in the number of students testing during the most restrictive period of the COVID-19 pandemic. However, a steady increase is observed. Additionally, one could assume that a steady increase in the number of students tested would have been observed, provided the pandemic did not occur. There has been a 57 percent increase in the number of students testing and a 13 percent increase in the average total test scores since the 2019-2020 school year.
