1.0 EXECUTIVE SUMMARY

Goodwyn Mills Cawood, LLC (GMC) was retained by DeKalb County School District (User), to conduct a Phase I ESA on an approximately 33.46-acre parcel located at 3456 Aztec Road in Doraville, DeKalb County, Georgia (Figure 1). The center coordinates for the property are latitude N33.8914977° and longitude W84.2719338° (Figures 2 and 3). The subject property is further described as parcel number 18 296 05 004. This Phase I ESA includes a records review of state and federally listed facilities, maps, interviews, historical research, and visual observations of the site. A Phase I ESA does not include any testing or sampling of materials (i.e., soil, water, air, building materials, etc.).

GMC conducted an Environmental Data Resources review for the subject site based on the All Appropriate Inquiries (AAI) standard checklist with search distances relevant to each environmental database. This records review revealed that there is one (1) facility on the federal CERCLIS NFRAP, two (2) facilities on the RCRA CORRACT list, eighteen (18) facilities on the List of State and Tribal Hazardous Facilities list , five (5) facilities on the state and tribal leaking storage tank list, one (1) facility listed on the Local Brownfield List, and two (2) facilities listed under other ascertainable records within the relative search distance of the subject property. Information regarding the records review is located in Section 5.1 and 5.2, and the Environmental Data Resources (EDR) report is attached as Appendix III.

GMC conducted a review of reasonably ascertainable historical documentation obtained from aerial photographs, fire insurance maps, USGS topographic maps, and street directories. This review was conducted in order to gain information on the historical use of the property and its adjoining area. The records reviewed that the subject property was historically undeveloped land with relatively mature vegetation and has operated as middle school since 1964.

A representative of GMC conducted a site reconnaissance on June 9, 2023. On the date of the site visit, representatives of GMC conducted exterior observations throughout the subject site and a delineation of aquatic resources. The elementary school and middle school have a shared parking lot which is accessible off of Aztec Road and splits the two footprints. The middle school included a one-story facility, gymnasium, and associated structures including a storage shed, a concrete basketball court, softball field, several trailers, and athletic field. The elementary school included a one-story facility with associated concrete activity court, playground area, open activity field, and several trailers. The southern portion of the property had a well-established hardwood tree line and unnamed tributary. Most of the parcel was lined with mature trees with the exception of approximately 500-feet of Aztec Road.

Representatives of GMC were unable to obtain an interview with the user prior to the completion of this report.

A representative of GMC interviewed Samuel Day, the current custodial worker for the school. He indicated the property had been a school site for many years and that to the best of his knowledge the property and adjoining properties have not been used for purposes that would likely have generated, used, or stored any hazardous substances or petroleum products.

GMC identified six (6) potential hazards and safety concerns within the search distance criteria of the subject property:

Streams
Fuel Pipelines
Industrial Facilities
Airports
Highway
Rail

Each of the identified hazards, including an Aerial Locations of Hazardous Atmospheres (ALOHA) Computer Program hypothetical scenario are discussed in Section 9 of this report. Based on the existing hazards and modeled results of potential threats to the site, GMC recommends sustaining the existing fencing around the school property.

This report was completed in general accordance with the requirements established by the American Society for Testing and Materials (ASTM) E 1527-21 Standard and also meets the requirements of the AAI rule. **This Assessment has revealed no evidence of Recognized Environmental Conditions (REC's), and no further investigation is recommended at this time.**

2.0 INTRODUCTION

Goodwyn Mills Cawood, LLC (GMC) was retained by DeKalb County School District (User), to conduct a Phase I ESA on an approximately 33.46-acre parcel located at 3456 Aztec Road in Doraville, DeKalb, Georgia (Figure 1). The center coordinates for the property are latitude N33.8914977° and longitude W84.2719338° (Figures 2 and 3). The subject property is further described as parcel number 18 296 05 004. This Phase I ESA includes a records review of state and federally listed facilities, maps, interviews, historical research, and visual observations of the site. A Phase I ESA does not include any testing or sampling of materials (i.e., soil, water, air, building materials, etc.).

2.1 Purpose

The purpose of a Phase I ESA is to conduct a records review, historical review, and visual site inspection to identify recognized environmental conditions at the subject property. The term *recognized environmental condition* means *(1)* the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* to the *environment*; *(2)* the likely presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* due to a *release* or likely *release* to the *environment*; or *(3)* the presence of *hazardous substances* or *petroleum products* in, on, or at the *subject property* under conditions that pose a *material threat* of a future *release* to the *environment*. The term includes hazardous substances or petroleum products, even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions.

2.2 Detailed Scope of Services

GMC conducted the Phase I ESA in general accordance with the AAI rule and the ASTM E 1527-21 Standard Practice for Environmental Site Assessments: Phase I ESA Process.

The scope of work performed as part of the Phase I ESA is as follows:

- A historical review of the use and improvements made to the subject site.
- A review of applicable building, zoning, planning, sewer, water, fire and environmental department records that would have information on or have an interest in the property and neighboring sites.
- An investigation of the subject property and neighboring properties with regard to the Environmental Protection Agency's (EPA) National Priorities List (NPL) or Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) list and similar state lists.
- An inspection of the site and all improvements with a visual inspection for hazardous materials and regulated non-hazardous materials.

- A review of available information to determine whether present owners or tenants have stored, created or discharged hazardous materials or waste, and, if applicable, a review of whether appropriate procedures and safeguards have been observed.

- A determination of whether the information gathered indicates the presence or likely presence of any hazardous substances or petroleum products in, on, or at the property due to activities at the property or from migration to the property from other properties. For the purpose of this document, the term migration refers to the movement of hazardous substances or petroleum products in any form, including solid and liquid at the surface or subsurface, and vapor in the subsurface.

- A written report summarizing the findings with conclusions as to the potential environmental degradation believed to be associated with the property.

2.3 Significant Assumptions

This report provides an overview of potential, past, and present environmental conditions associated with the subject property. The report is limited to the information available at the time of the assessment. It is possible that unreported or illegal disposal of materials impairing the environmental condition of the subject property may have occurred which could not be identified. The conclusions and recommendations regarding the environmental conditions presented in this report are based on the scope of work authorized by the User. Virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

2.4 Limitations and Exceptions

GMC has performed this investigation for the exclusive use of the User, their lending institution and their legal counsel specifically for the subject property. GMC prohibits republication or reuse of any report without GMC's prior written consent.

The conclusions contained in this report are based upon the conditions at the property during the time of the investigation. As stated in the ASTM E 1527-21 standard and AAI, an environmental site assessment meeting or exceeding the standard and completed less than 180 days prior to the date of acquisition of the property or (for transactions not involving an acquisition) the date of the intended transaction is presumed to be valid.

Environmental problems at this site not included in the scope of work, if any, are not the responsibility of GMC. Examples of such problems are unreported releases, unreported sites, and sites not listed by the Georgia Environmental Protection Division (EPD) or by the EPA.

GMC has made no attempt to independently verify the information provided by others, and cannot be held responsible for false or erroneous information that was provided to GMC. Any documents or information that was obtained by GMC in the preparation of this report is assumed to be true and accurate.

The only warranty made by GMC in connection with the services provided is that we have used the degree of skill and care ordinarily exercised by similarly situated professionals in our locality. No other warranty, expressed or implied, is made or intended. GMC will not be required to sign any documents, no matter by whom requested, that would result in GMC having to certify, guarantee or warrant the existence of conditions whose existence GMC cannot ascertain. The user also agrees not to make resolution of any dispute with GMC or payment of any amount due to GMC in any way contingent upon GMC signing any such certification.

2.5 Special Terms and Conditions

The following are a list of issues that GMC specifically did not address in this ESA; however, the list is not exhaustive:

1. Asbestos-Containing Building Materials
2. Biological Agents
3. Cultural and Historic Resources
4. Ecological Resources
5. Endangered and Threatened Species
6. Health and Safety
7. Indoor Air Quality unrelated to releases of hazardous substances or petroleum products
8. Industrial Hygiene
9. Lead-Based Paint
10. Lead in Drinking Water
11. Mold
12. Radon
13. Regulatory Compliance
14. Wetlands or other Waters of the U.S.

2.6 User Reliance

The User may rely upon this document. The User's attorneys and other parties that are considered "interested parties" may rely upon this document by permission of the owner, and to the extent outlined in the AAI rule and ASTM E 1527-21 Standard. An environmental professional is not required to independently verify the information provided but may rely on information provided unless it is obvious that certain information is not correct based on other information or that he or she has actual knowledge that certain information is incorrect.

3.0 SITE AND VICINITY DESCRIPTION

3.1 Site Location and Legal Description

The subject site is located at 3456 Aztec Road in Doraville, DeKalb County, Georgia (Figure 1). The center coordinates for the property are latitude N33.8914977° and longitude W84.2719338° (Figures 2 and 3). The subject property is further described as parcel number 18 296 05 004.

3.2 Site and Vicinity Characteristics

Surface Drainage

The 2020 Chamblee, GA quadrangle map shows that the elevation of the site is approximately 960 feet above sea level. Surface water runoff flows south-west towards a nearby perennial stream. The stream flows south- east and converges with North Fork Peachtree Creek, which eventually flows into Peachtree Creek (HUC 0313000112).

Regional Characteristics and Geological Setting

Northwest Georgia experiences all four seasons. Summers typically consist of long spells of warm and humid weather. Average afternoon high temperatures are in the upper 80s to around 90. Readings of 90 or higher can be expected on 30 to 60 days per year. Overnight lows usually range from the upper 60s to lower 70s. Temperatures during winter months are more variable. Oftentimes, stretches of mild weather will alternate with cold spells. Winter high temperatures average in the 50s. Lows average in the mid to lower 30s. Lows of 32 degrees or lower can be expected on 50 to 70 days. Spring and Autumn seasons are characterized by much variability from day to day and from year to year. The first freeze, on average, occurs in late October while the average date of the last freeze occurs in early April. A measurable amount of rain falls on about 120 days each year, producing amounts averaging between 50 and 55 inches annually. As for snowfall, the average annual total is less than one inch. Averaging over many years, the driest months are September and October while the wettest month is March.

The City of Doraville, Georgia is located in the Gainesville Ridges District of the Upland Georgia Physiographic Section of the Piedmont Province (Clark and Zisa, 1976). The Gainesville Ridge District it is characterized by low, linear, parallel ridges separated by narrow valleys. The ridges strongly influence the courses of the Chattahoochee River and its tributaries. Elevation in this region varies from between 1500 feet in the northeast region to 700 feet in the southwest region.

Hydrogeology

Doraville lies within Georgia's Piedmont region, which extends from the Fall Line to the Blue Ridge Mountains. The Piedmont Region slowly rises in elevation from south to north, with features such as gently sloping hills, narrow valleys, and isolated mountains. Elevation fluctuates between 200 feet above sea level, to 1,000 feet above sea level.

According to the DeKalb County website, the source for DeKalb County's drinking water is the Chattahoochee River. DeKalb County has a raw water pumping station

Soils

According to the Web Soil Survey (WSS), the site consists of the two (2) soil types, listed below. Figure 4 illustrates the location of the subject site and the soil types located there. A brief description of the soils, as written in the soil survey, is as follows:

- ***Toccoa sandy loam, 0 to 2 percent slopes (Tf)***
  This frequently flooded soil is often found in flood plains. When not located within a flood plain, the soil is classified as moderately well drained with a depth to water table of about 30 to 60 inches. This is in hydrologic soil group A and is not classified as a hydric soil.
- ***Urban land, (Ud)***
  This occurs within an area of high population density. Soils classified as urban land can be significantly changed by human-transported materials, human-altered materials, or minimally altered or intact "native" soils.

The soils listed above are not listed as hydric on the national Hydric Soils List. A hydric soil is one that is saturated, flooded, or ponded long enough during the growing season to develop anaerobic conditions in the upper horizons.

3.3 Current Use of Property

Representatives of GMC visited the subject site on June 9, 2023. The property is currently being used as a middle school and elementary school for the DeKalb County School District.

3.4 Description of Structures, Roads, and Other Improvements on Site

- Structures
  The two primary buildings on the property are Cary Reynolds Elementary School on the northern portion of the site and Sequoyah Middle School towards the center of the site. Both the middle and elementary schools are single story buildings. A separate two-story structure measuring approximately 5,500 square feet exists on the elementary school footprint. Between the two schools is a parking lot area which contains three (3) single story buildings measuring approximately 4,500 square feet and three (3) trailers. West of Sequoyah Middle School are six (6) single story buildings measuring approximately 4,400 square feet, one (1) single story building measuring approximately 850 square feet, and three (3) trailers. The south end of the property contains small structures associated with athletic fields.
- Roads
  The property can be accessed from Aztec Road on both the east and north sides of the property. Additionally, the property can be accessed from Stewart Road on the western side of the property which leads to a smaller parking area which connects to the main entrance and parking areas for both schools. The main entrance of the school is approximately 0.5 miles from the intersection of Interstates 285 and 85.
- Potable Water Supply
  The site has access to the municipal water supply.

- Sewage Disposal System
  The site has access to the municipal sewer supply.

4.0 USER PROVIDED INFORMATION

Representatives of GMC were unable to obtain an interview with the user prior to the completion of this report.

5.0 RECORDS REVIEW

The purpose of the records review is to obtain and review records that will help identify recognized environmental conditions in connection with the property. Some records reviewed pertain not only to the property, but also to properties with an additional approximate search distance in order to help assess the likelihood of problems from migrating hazardous substances or petroleum products. Unless stated otherwise, the approximate minimum search distances used below were as specified in the ASTM Standard E 1527-21.

5.1 Standard Records Review

GMC conducted an Environmental Data Resources (EDR) review for the subject site. Below is the AAI standard checklist of environmental databases reviewed with search distances relevant to each database.

These databases are maintained by the EPA and the Georgia EPD and are reviewed to determine if records exist regarding reported releases of hazardous substances and petroleum products on or near the property. The subject parcel was found on the 2021 Chamblee, GA U.S. Geological Survey Quadrangle Map.

5.4 Historical Use Information on the Property and Adjoining Properties

GMC conducted a review of reasonably ascertainable historical documentation obtained from aerial photographs, fire insurance maps, USGS topographic maps, and street directories. This review was conducted in order to gain information on the historical use of the property and its adjoining area.

5.4.1 Aerial Photographs

The aerial photo package was obtained from EDR and includes historical aerial photos taken from 1938, 1940, 1949, 1955, 1960, 1968, 1972, 1978, 1981, 1988, 2007, 2010, 2015, and 2019 (Appendix V). Between the years of 1938-1955 aerial images show the subject property and adjoining properties as mostly undeveloped land. The 1955 and 1960 aerials show development around the subject property, first to the north and then to the west. The existing schools first appear on aerial imagery in 1968, after which development adjacent to the subject property continues.

5.4.2 Sanborn Fire Insurance Maps

The HIG Historical Map Collection and the United States Library of Congress Map Collection were searched for fire insurance maps (FIMs), real estate atlases and similar maps for the site location and adjoining properties. No FIMs or similar maps were identified for the site location and/or adjoining properties.

5.4.3 Historical Topographic Maps

The topographic map package was obtained from EDR and includes historical topo maps from 1888, 1895, 1928, 1929, 1968, 1973, 1982, 1992, 1995, 2014, 2017, and 2020 (Appendix V). It should be noted that historical topographic maps are primarily applicable for general site chronology and the majority of available topographic maps do not generally depict site specific activities.

5.4.4 City Directories

City Directories were obtained from EDR and includes city and suburban directory information from 1905 to 2020. The directories indicate the subject property has been DeKalb County Board of Education's property from 1966 to 2014, listing the subject property as Cary Reynolds Elementary School. The subject parcel also contains Sequoyah Middle School. The directories also identify the property's surrounding the subject property as suburban residences throughout this time period.

6.0 SITE RECONNAISSANCE

6.1 Methodology and Limiting Conditions

On June 9, 2023, representatives of GMC conducted a reconnaissance at and within an approximate 1-mile radius around the subject site. Except for the limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM Standard E 1527-21.

6.2 General Site Setting

The subject property consists of an approximately 33.46-acre parcel located at 3456 Aztec Road in Doraville, DeKalb County, Georgia. The site consists of an elementary school and middle school. The surrounding area consists of primarily residential housing. The main entrance of the school is approximate 0.5 miles west of the intersection of Interstates 285 and 85.

6.3 Exterior Observations

A representative of GMC conducted a site reconnaissance on June 9, 2023. On the date of the site visit, representatives of GMC conducted exterior observations throughout the subject site and a delineation of aquatic resources. The elementary school and middle school have a shared parking lot which is accessible off of Aztec Road and splits the two footprints. The middle school included a one-story facility, gymnasium, and associated structures including a storage shed, a concrete basketball court, softball field, several trailers, and athletic field. The elementary school included a one-story facility with associated concrete activity court, playground area, open activity field, and several trailers. The southern portion of the property had a well-established hardwood tree line and unnamed tributary. Most of the parcel was lined with mature trees with the exception of approximately 500-feet of Aztec Road.

6.4 Interior Observations

On the day of the site visit, representatives of GMC conducted interior observations throughout the Sequoyah Middle School, where accessible. The school consisted of concrete walls and floors and contained front administration offices, a medical clinic, a break room and conference room, a media center, a kitchen with stainless steel fixtures, a gymnasium, a large cafeteria, and multiple offices and classrooms throughout the facility. The school also contained various storage closets with miscellaneous cleaning equipment and household cleaners. There were no areas identified that stored hazardous materials or petroleum.

7.0 INTERVIEWS

The purpose of interviews is to obtain information indicating recognized environmental conditions in connection with the property.

7.1 Interview with User

Representatives of GMC were unable to obtain an interview with the user prior to the completion of this report.

7.2 Interview with Owner Representative/Key Site Personnel

A representative of GMC interviewed Samuel Day, the current custodial worker for the school. He indicated the property had been a school site for many years and that to the best of his knowledge the property and adjoining properties have not been used for purposes that would likely have generated, used, or stored any hazardous substances or petroleum products.

8.0 SITE SELECTION CRITERIA

These seven (7) major items (criteria) were evaluated as part of this assessment for the selection of this school site:

1. Size
2. Utilities
3. Safety Hazards
4. Environmental Factors
5. Geographical and Related Factors
6. Site Development
7. Criteria for Section

Size: The minimum acreage requirement of a middle school site is 12 acres, plus one acre per 100 students in full time enrollment. The minimum size requirement of a high school site is 20 acres, plus one acre per 100 students in full time enrollment. The subject property does not meet the minimum requirements with an approximate size of 33.46 acres, therefore, per Department of Education guidance, a variance may be required.

Utilities: All utilities are currently available to the site.

Safety Hazards: Five (5) of the thirteen (13) listed hazards were identified within the distance chart in the "Risk Hazard Guidance Document". These hazards will be addressed in the following Risk Hazard Analysis Section.

Environmental Factors: The subject property is located on the existing Sequoyah Middle School site. There are a few industrial facilities close by. GMC utilized the USFWS Information for Planning and Consultation (IPaC) website to obtain an official species of protected species that may occur in the project area. The list provided at total of three (3) species that should be considered in an effects analysis for the project. However the site is already cleared, developed, and maintained; therefore, there is no suitable habitat for the listed species.. The IPaC Report is included in Appendix VI.

Geographical and Related Factors: The site tentatively meets the criteria of this section in the Georgia DOE Guide. The flood plain determination letter from the Georgia Environmental Protection Division, provided in Appendix VI, indicates the proposed school is outside the nearest 100-year floodplain.

Site Development: The site is currently developed and to our knowledge, the footprint of the proposed facility will not be significantly changed from the current footprint. Therefore, the physical characteristics of the site are such that the cost of grading, drainage and development will be relatively low.

Criteria for Selection: The following preliminary hazards and safety concerns were identified within the search distance criteria:

Streams
Fuel Pipelines
Industrial Facilities
Airports
Highway and Rail

These items are discussed in detail in the following section.

9.0 RISK/HAZARD ANALYSIS

Federal and State environmental databases were reviewed and a drive through survey of the search radius was conducted. Research and/or inspections of each potential hazard were performed in an effort to evaluate its environmental condition and potential effect on the subject property. Some specific features and relative distances or locations for this stage of the review are described below.

Distances for Identified Hazards		
Feature	**Location/ Orientation**	**Comments**
Streams	On or adjacent to Site	Unless a major stream or river, only streams located adjacent to or on the site are of concern for children's direct access
	Up-Stream of Site	Large water-sheds are sources for flooding. Sites located at confluence of streams are subject to flooding
Pond and Lakes	On or adjacent to Site	Bodies of water on or adjacent to site are of concern for children's direct access
	Up-Stream of Site	Source for flooding due to failure/breach or activating the emergency spillway
Power Lines	300 feet of Site	must be greater than 300 feet from the portion of the site to be used for facilities or where students gather
Fuel Pipelines	1 – Mile Radius	
Chemical Pipelines	1 – Mile Radius	
Fuel Facilities	1 – Mile Radius	½ mile for gas stations and 1 mile for large fuel storage facilities
Industrial Facilities	1 – Mile Radius	
Airports	3 – Mile Radius	Sites should not be located in-line with runways.
Highways and Rail	1 – Mile Radius	½ mile for highways and 1 mile for railroads
Landfills	½ - Mile Radius	Landfills adjacent to a site can be a major concern for vectors and methane. Methane gas migration may extend ½-mile from landfill
Dry Cleaners	1 – Mile Radius	Very few cleaners store large quantities of cleaning fluids.
Power Plants	1 – Mile Radius	Electrical substations – ½ mile
Nuclear Facilities	3 – Mile Radius	

Potential hazards from the list above were researched and include the following identified potential hazards that could possibly impact the site:

1. Streams
2. Industrial Facilities
3. Major Highway
4. Fuel Pipelines
5. Airports
6. Rail

Identification of potential hazards included a walk-through survey as well as interviews, reviewing of environmental registrations, permits, incidents, complaints, violations, response actions, and remedial activities of sites within three miles of the subject site.

GMC reviewed the topographic quadrangle map of the site, performed a review of the site vicinity, and conducted a visual reconnaissance of the site and immediate site area for this project.

9.1 Hazard Discussion

While conducting this Phase I ESA on the subject property, GMC followed the GDOE Facilities Services Unit documents entitled "A Guide to School Site Selection" and "Risk Hazard Guidance Document".

The GDOE requires a hazard assessment to be conducted if the Phase I ESA discovers any of the 13 hazards plus other features, impacts or sources not listed in the Guide within the recommended radii of the proposed site. GMC found that six (6) potential hazards are located within the GDOE recommended search radii of the subject property.

9.1.1 Potential Hazards

1. Streams: There is a perennial stream measuring approximately 5-feet wide which is located on the western side of the property and flows south where it discharges into an unnamed tributary of Peachtree Creek. The school property is fenced, which limits access to the stream and mitigates the risk of injury. The topography of southwestern corner of the school property is such that the stream is 30 to 40 feet below the elevation of the school, which serves to prevent flooding during storm events.

2. Industrial Facilities: Northeast of the subject site, a light manufacturing industrial park contains several small logistics firms and various light manufacturing facilities. Within that area, the largest facility is Tire Rack Distribution Center, located approximately 0.5 miles from the subject site.

The Tire Rack Distribution Center is located at 3101 McCall Drive, northeast to the subject property on the opposite side of Interstate 285. The distribution center is part of an approximately 30,000 square foot (sf) facility that is shared with JFC International Inc, which is a wholesale grocer. The records do not document this facility as using hazardous materials or appearing on EPD's hazardous site inventory.

None of the facilities reviewed fall into any of the four categories listed under the Hazards Criteria for industrial or manufacturing facilities. This potential hazard is not a danger to the school site.

3. Major Highways: There are two (2) major road highways within 0.5 miles of the subject property. The below table has been compiled using the latest Georgia Department of Transportation (GDOT) 2022 Annual Average Daily Traffic acquired from the Traffic Analysis & Data Application (TADA).

Road Name	Distance from Site	Ave. Daily Traffic Count
Interstate 85 (I-85)	0.3-miles	216,000
Interstate 285 (I-285)	0.4-miles	197,000
Buford Highway NE	0.5-miles	28,100
Chamblee Tucker Road	0.6-miles	28,700

The traffic movement on I-85 and I-285 present a potential threat of a fuel truck accident within a 0.5-mile radius of the proposed facility while transporting fuel. Neither a gas station or fuel storage facility was identified within 0.5 miles of the proposed site and therefore this potential hazard is not a danger to the school site.

4. Fuel Pipelines: One (1) fuel pipeline exists within a 1-mile radius of the subject property (Figure 5). The Atlanta Gas Light pipeline containing natural gas is located approximately 0.5 miles straight-line distance north northwest from the closest point to the subject property.

The close proximity of the pipeline presents a potential threat of leaks and explosion hazards and are a danger to the school site. These threats were included in the modeled hypothetical scenarios described in Section 9.2

5. Airports: One (1) airport exists within a 3-mile radius of the subject property. The Dekalb Peachtree Airport is located approximately 1.4-miles straight-line distance west southwest from the closest point to the subject property.

While the airport is near the school site, the school site is not located in line with the runways.

6. Rail: Several railroads are located approximately 0.5 miles northeast of the school site, including lines owned by Norfolk Southern and the Metro Atlanta Rapid Transit Authority. These railroads present a potential threat of a rail tanker accident within a 1-mile radius of the proposed facility while transporting fuel.

9.1.2 Prevailing Wind Direction

GMC utilized information from the Wind & weather statistics at Hartsfield-Jackson Atlanta International Airport regarding the prevailing wind direction in this area. Directional data charts report the wind direction in the area is predominantly from the northwest.

9.1.3 Modeling Calculations

GMC completed a computerized hazard modeling application to plan for and respond to chemical emergencies in the event of a flammable, explosive, or toxic material release within the recommended radii of the proposed site. GMC utilized the Areal Locations of Hazardous Atmospheres (ALOHA) Computer Program.

ALOHA is part of the CAMEO software suite, which is developed jointly by the National Oceanic and Atmospheric Administration (NOAA) and the U.S. Environmental Protection Agency (EPA). The model allows the quick prediction of hazard zones surrounding the release of flammable, explosive, or toxic materials. The model utilizes known chemical data and assumptions are made for real-time scenarios. The model is only an approximation of the incident and other non-input factors or parameters may influence final damage areas.

9.2 Data Evaluation

GMC utilized ALOHA to model three hypothetical accidents from the potential hazards located within the GDOE recommended search radii of the subject property that pose a significant threat. The threat at the site for the modeled hypothetical accidents are measured in either kilowatts per square meter (kW/m^2) or pounds per square inch (psi). The table below summarizes each of the threat zones and the potential threat within each zone.

Threat Zone	Potential Threat (kW/m^2)	Potential Threat (psi)	Potential Threat (ppm)	Potential Threat (ppm)
Red	10.0 kW/m^2 = potentially lethal within 60 sec	8.0 psi = destruction of buildings	4000 ppm = Life-threatening health effects or death	PAC-1 = Mild transient health effects
Orange	5.0 kW/m^2 = 2nd degree burns within 60 sec	3.5 psi = serious injury likely	800 ppm = Irreversible or other serious, long-lasting adverse health effects	PAC-2 = Irreversible or other serious health effects that could impair the ability to take protective action.
Yellow	2.0 kW/m^2 = pain within 60 sec	1.0 psi = shatters glass	52 ppm = Notable discomfort, irritation, or certain asymptomatic non-sensory effects.	PAC-3 = Life Threatening health effects

9.2.1 AGL Pipeline:

GMC modeled the natural gas line, northwest from the project area. Scenarios were calculated for methane, a commonly associated hazardous material of natural gas, in an approximate 10-inch pipe located 0.5-miles north and 0.2-miles west of the school with the wind direction from the west northwest at 9 mph. Results of each Scenario are summarized below:

Scenario	Threat Modeled	Red Threat (yards)	Orange Threat (yards)	Yellow Threat (yards)	Threat at Site
Toxic Vapor Cloud	Toxicity	44	58	110	0 ppm
Flammable Area of Cloud	Thermal Radiation	146	NA	364	0 kW/m^2
Blast area of Vapor Cloud	Thermal Radiation	LOC not exceeded	LOC not exceeded	164	0 psi
Jet fire	Thermal Radiation	40	58	89	0.0138 kW/m^2

*BLEVE= boiling liquid expanding vapor explosion *LOC= Level of Concern

According to the results, the threat zone created by thermal radiation from a blast area of a vapor cloud would result in shattering of glass up to 164 yards but would not produce enough pressure to impact the school site. The threat zone created by thermal radiation from a jet fire, a flammable gas that catches on fire as it escapes a gas pipeline, would result in a flame length of 89 yards but would not produce measurable impacts at the school site. Model results for toxic vapor cloud and flammable area of a cloud showed no measurable impact at the school site.

9.2.2 Industrial Facilities:

GMC modeled a hypothetical accident site at the intersection of I-85 and I-285, located near the Tire Rack Distribution Center facility, located approximately 2,500-feet northeast of the proposed school. Scenarios were calculated for benzene, a commonly associated hazardous material associated with logistic trucks into and out of the distribution network. Scenarios were calculated for an accident at the nearby intersection of I-285 and I-85, which is approximately 0.5 miles east of the school, involving a 150-gallon fuel tank from a semi-truck with the wind direction from the west-northwest at 9 mph. Results of each Scenario are summarized below:

Scenario	Threat Modeled	Red Threat (yards)	Orange Threat (yards)	Yellow Threat (yards)	Threat at Site
Toxic Dispersion	Toxicity	10.9	18	143	0 ppm
Vapor Cloud Explosion	Overpressure	0	0	0	0 psi
Vapor Cloud Explosion	Flammability	10.9	NA	19	0 ppm
Blast Area	Thermal Radiation	32	43	62	0.0108 kW/m^2
BLEVE*	Thermal Radiation	108	153	239	0.259 kW/m^2

*BLEVE= boiling liquid expanding vapor explosion *LOC= Level of Concern

According to the results, the threat zone created by thermal radiation from a Leaking Tank Explosion would result in a flame length of 32 yards but no significant threat at the school site. The threat zone created by a BLEVE would result in a maximum fireball diameter of 239 yards with no significant threat at the school site.

9.3 Mitigation Recommendations

Based on the two (2) hypothetical accidents and modeled results of potential threats to the site, GMC did not identify any significant threats to the school site and therefore no mitigation is necessary. GMC recommends maintaining fencing to limit access to the perennial stream located on the school site and mitigate the associated risk.

10.0 FINDINGS

The environmental conditions associated with the property include the following:

- GMC conducted an Environmental Data Resources review for the subject site based on the All-Appropriate Inquiries (AAI) standard checklist with search distances relevant to each environmental database. This records review revealed that there is one (1) facilities on the federal CERCLIS NFRAP list, two (2) facilities on the RCRA CORRACT list, eighteen (18) facilities on the State and Tribal CERCLIS list, five (5) facilities on the LST/UST list, one (1) facility on the State and Tribal Brownsfield list, and three (3) additional facilities listed on the additional environmental records list within the relative search distance of the subject property. Information regarding the records review is located in Section 5.1 and 5.2, and the Environmental Data Resources (EDR) report is attached as Appendix III.

- GMC conducted a review of reasonably ascertainable historical documentation obtained from aerial photographs, fire insurance maps, USGS topographic maps, and street directories. This review was conducted in order to gain information on the historical use of the property and its adjoining area. The records reviewed that the subject property was historically undeveloped land with relatively mature vegetation and has operated as middle school since 1964.

- A representative of GMC conducted a site reconnaissance on June 9, 2023. On the date of the site visit, representatives of GMC conducted exterior observations throughout the subject site and a delineation of aquatic resources. The elementary school and middle school have a shared parking lot which is accessible off of Aztec Road and splits the two footprints. The middle school included a one-story facility, gymnasium, and associated structures including a storage shed, a concrete basketball court, softball field, several trailers, and athletic field. The elementary school included a one-story facility with associated concrete activity court, playground area, open activity field, and several trailers. The southern portion of the property had a well-established hardwood tree line and unnamed tributary. Most of the parcel was lined with mature trees with the exception of approximately 500-feet of Aztec Road.

- On the day of the site visit, representatives of GMC conducted interior observations throughout the Sequoyah Middle School, where accessible. The school consisted of concrete walls and floors and contained front administration offices, a medical clinic, a break room and conference room, a media center, a kitchen with stainless steel fixtures, a large cafeteria, a gymnasium and multiple offices and classrooms throughout the facility. The school also contained various storage closets with miscellaneous cleaning equipment and household cleaners. There were no areas identified that stored hazardous materials or petroleum.

- Representatives of GMC were unable to obtain an interview with the user prior to the completion of this report.

- A representative of GMC interviewed Samuel Day, the current custodial worker for the school. He indicated the property had been a school site for many years and that to the best of his knowledge the property and adjoining properties have not been used for purposes that would likely have generated, used, or stored any hazardous substances or petroleum products.

GMC utilized ALOHA to model two (2) hypothetical accidents from the potential hazards located within the GDOE recommended search radii of the subject property that pose a significant threat. GMC determined no significant threat existed based on the two (2) hypothetical accidents and modeled results of potential threats to the site. GMC recommends maintaining fencing to limit access to the perennial stream located on the school site and mitigate the associated risk.

11.0 OPINIONS AND CONCLUSION

11.1 Opinions

In GMC's opinion, the ±33.46-acre subject property located at 3456 Aztec Road, Doraville, DeKalb County, Georgia with approximate center coordinates of N33.8914977° and longitude W84.2719338°, has not revealed evidence of any recognized environmental conditions, controlled recognized environmental conditions, historical recognized environmental conditions, or de minimis conditions, and further investigation is not deemed necessary at this time. These opinions are based on the findings outlined in Section 10.0 of this report.

11.2 Data Gaps and Data Failures

Data gap is defined in the ASTM standard as a lack of or inability to obtain information required by the Standard despite good faith efforts by the environmental professional to gather such information. One data gap was identified during the course of this assessment. Representatives of GMC were unable to obtain an interview with the user prior to the completion of this report. However, this is not considered a significant data gap as the lack of this interview was not determined to prevent the environmental professional from making a determination on potential REC's associated with the subject property.

Data failure is one type of data gap and is defined as a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful. No data failures were identified for this assessment.

11.3 Conclusion

In conclusion, GMC has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-21 for the subject property located at 3456 Aztec Road in Doraville, DeKalb County, Georgia with approximate center coordinates of N33.8914977° and longitude W84.2719338° totaling ±33.46-acres, the *subject property*. Any exceptions to, or deletions from, this practice are described in Section 2.4 and Section 11.4 of this report. This assessment has revealed no evidence of *recognized environmental conditions, controlled recognized environmental conditions, or significant data gaps,* in connection with the *subject property*.

11.4 Deviations

Except for the limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM Standard E 1527-21.

11.5 Additional Services

No additional services were performed in connection with this document.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/22/2023 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Natural Resources' Hazardous Site Inventory.

Environmental Interest/Information System:
AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

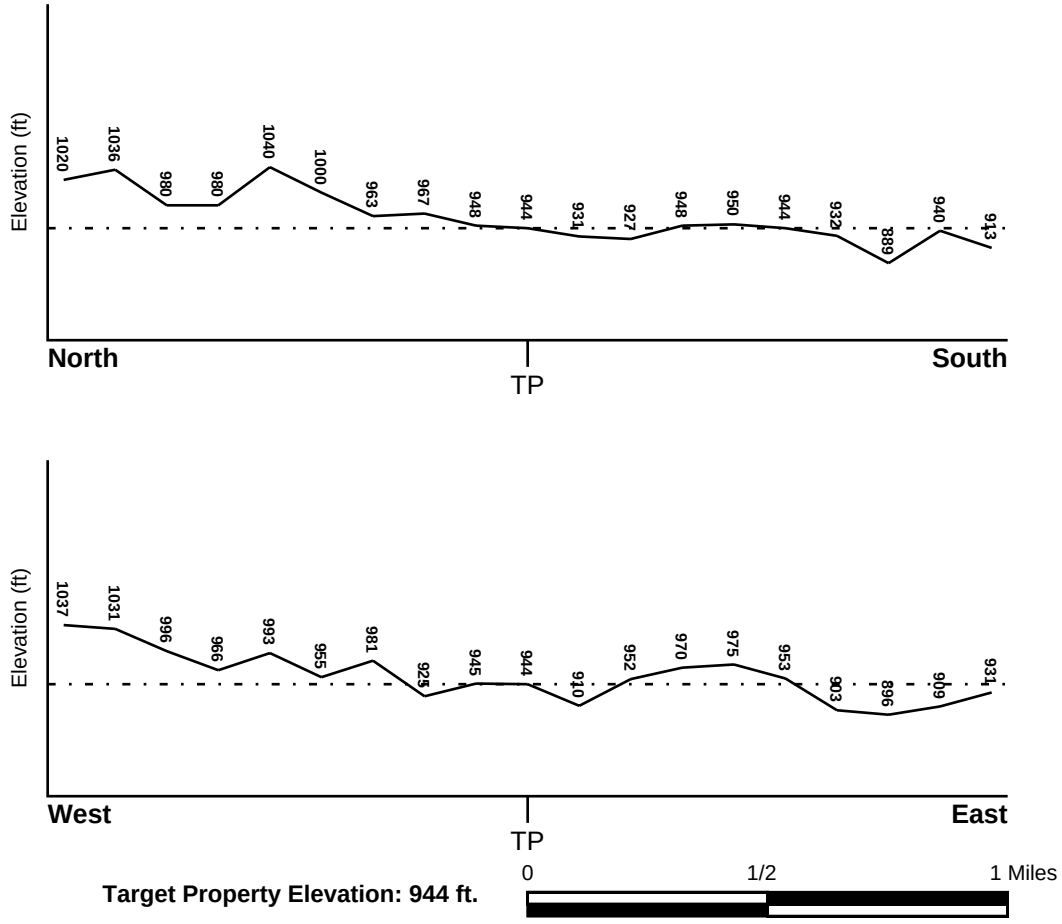

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 944 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at approximately five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1905 through current. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

Summary information obtained is provided in the text of this report.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

Thank you for your request for information on federally listed species and important wildlife habitats that may occur in your project area. The U.S. Fish and Wildlife Service (Service) has responsibility for certain species of wildlife under the Endangered Species Act (ESA) of 1973 as amended (16 USC 1531 et seq.), the Migratory Bird Treaty Act (MBTA) as amended (16 USC 701-715), Fish and Wildlife Coordination Act (FWCA) (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.) and the Bald and Golden Eagle Protection Act (BGEPA) as amended (16 USC 668-668c). We are providing the following guidance to assist you in determining which federally imperiled species may or may not occur within your project area and to recommend some conservation measures that can be included in your project design if you determine those species or designated critical habitat may be affected by your proposed project.

FEDERALLY-LISTED SPECIES AND DESIGNATED CRITICAL HABITAT

Attached is a list of endangered, threatened, and proposed species that may occur in your project area. Your project area may not necessarily include all or any of these species. Under the ESA, it is the responsibility of the Federal action agency, project proponent, or their designated representative to determine if a proposed action "may affect" endangered, threatened, or proposed species, or designated critical habitat, and if so, to consult with the Service further. Similarly, it is the responsibility of the Federal action agency or project proponent, not the Service, to make “no effect” determinations. If you determine that your proposed action will have “no effect” on threatened or endangered species or their respective critical habitat, you do not need to seek concurrence with the Service. Nevertheless, it is a violation of Federal law to harm or harass any federally listed threatened or endangered fish or wildlife species without the appropriate permit. If you need additional information to assist in your effect determination, please contact the Service.

If you determine that your proposed action may affect federally listed species, please consult with the Service. Through the consultation process, we will analyze information contained in a biological assessment or equivalent document that you provide. If your proposed action is associated with Federal funding or permitting, consultation will occur with the Federal agency under section 7(a)(2) of the ESA. Otherwise, an incidental take permit pursuant to section 10(a)(1)(B) of the ESA (also known as a Habitat Conservation Plan) may be necessary to exempt harm or harass federally listed threatened or endangered fish or wildlife species. For more information regarding formal consultation and HCPs, please see the Service's Section 7 Consultation Library and Habitat Conservation Plans Library Collections.

Action Area. The scope of federally listed species compliance not only includes direct effects, but also any indirect effects of project activities (e.g., equipment staging areas, offsite borrow material areas, or utility relocations). The action area is the spatial extent of an action's direct and indirect modifications or impacts to the land, water, or air (50 CFR 402.02). Large projects may have effects to land, water, or air outside the immediate footprint of the project, and these areas should be included as part of the action area. Effects to land, water, or air outside of a project footprint could include things like lighting, dust, smoke, and noise. To obtain a complete list of species, the action area should be uploaded or drawn in IPaC rather than just the project footprint.

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. An updated list may be requested through IPaC.

ESA Section 7 consultation (and related tools such as the EDGES and/or DKeys) apply to projects being permitted or funded by a Federal agency. However, please note that a lead federal agency may consider an action area that excludes portions of the project footprint. In these cases, further coordination with our office may be required to ensure compliance with the ESA. It is the responsibility of the project proponent to coordinate with the lead federal agency to understand the action and action area being reviewed as part of ESA Section 7 consultation.

How to Submit a Project Review Package. If you determine that your action may affect any federally listed species and would like technical assistance from our office, please send us a complete project review package. A step by step guide is available at the Georgia Ecological Services Project Planning and Review page (https://www.fws.gov/office/georgia-ecological-services/project-planning-review).

Beginning April 1, 2023, requests for threatened and endangered species project reviews must be submitted to our office using the process described below. (If you are not emailing us to submit a project for review, your email will be forwarded to the appropriate staff.) This is a three-step process. All steps must be completed to ensure your project is reviewed by a biologist in our office and you receive a timely response. In brief the steps are:

Step 1. Request an official species list for your project through IPaC (Done!)
Step 2. Complete applicable Determination Keys
Step 3. Send your complete project project review package to **GAES_Assistance@FWS.gov** for review if no DKey is applicable or all aspects of the project are not addressed by DKeys, i.e. a species returned by IPaC does not have a DKey to address impacts to it. A complete project review package should include:

1. A description of the proposed action, including any measures intended to avoid, minimize, or offset effects of the action. The description shall provide sufficient detail to assess the effects of the action on listed species and critical habitat, such as the purpose of the action; duration and timing of the action; location (latitude and longitude); specific activities involving disturbance to land, water, and air, and how they will be carried out; current description of areas to be affected directly or indirectly by the action; and maps, drawings, or similar schematics of the action.
2. An updated Official Species List and DKey results
3. Biological Assessments (may include habitat assessments and information on the presence of listed species in the action area);
4. Description of effects of the action on species in the action area and, if relevant, effect determinations for species and critical habitat;
5. Conservation measures and any other available information related to the nature and scope of the proposed action relevant to its effects on listed species or designated critical habitat (e.g., management plans related to stormwater, vegetation, erosion and sediment plans). Visit the Georgia Conservation Planning Toolbox (https://www.fws.gov/story/conservation-tools-georgia) for information about conservation measures.
6. In the email subject line, use the following format to include the Project Code from your IPaC species list and the county in which the project is located (Example: Project Code: 2023-0049730 Gwinnett Co.). For Georgia Department of Transportation related projects, please work with the Office of Environmental Services ecologist to determine the appropriate USFWS transportation liaison.

The Georgia Ecological Services Field Office will send a response email within approximately 30 days of receipt with technical assistance or further recommendations for specific species.

WETLANDS AND FLOODPLAINS

Under Executive Orders 11988 and 11990, Federal agencies are required to minimize the destruction, loss, or degradation of wetlands and floodplains, and preserve and enhance their natural and beneficial values. These habitats should be conserved through avoidance, or mitigated to ensure that there would be no net loss of wetlands function and value. We encourage you to use the National Wetland Inventory (NWI) maps in conjunction with ground-truthing to identify wetlands occurring in your project area. The Service's NWI program website (https://www.fws.gov/program/national-wetlands-inventory) integrates digital map data with other resource information. We also recommend you contact the U.S. Army Corps of Engineers for

permitting requirements under section 404 of the Clean Water Act if your proposed action could impact floodplains or wetlands.

MIGRATORY BIRDS

The MBTA prohibits the taking of migratory birds, nests, and eggs, except as permitted by the Service's Migratory Birds Program (https://fws.gov/program/migratory-birds). To minimize the likelihood of adverse impacts to migratory birds, we recommend construction activities occur outside the general bird nesting season from March through August, or that areas proposed for construction during the nesting season be surveyed, and when occupied, avoided until the young have fledged.

We recommend review of Birds of Conservation Concern to fully evaluate the effects to the birds at your site. This list identifies birds that are potentially threatened by disturbance and construction. It can be found at the Service's Migratory Birds Conservation Library Collection (https://fws.gov/library/collections/migratory-bird-conservation-documents).

Information related to best practices and migratory birds can be found at the Service's Avoiding and Minimizing Incidental Take of Migratory Birds Library Collection (https://fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds).

BALD AND GOLDEN EAGLES

The bald eagle (*Haliaeetus leucocephalus*) was delisted under the ESA on August 9, 2007. Both the bald eagle and golden eagle (*Aquila chrysaetos*) are still protected under the MBTA and BGEPA. The BGEPA affords both eagles protection in addition to that provided by the MBTA, in particular, by making it unlawful to "disturb" eagles. Under the BGEPA, the Service may issue limited permits to incidentally "take" eagles (e.g., injury, interfering with normal breeding, feeding, or sheltering behavior nest abandonment). For information on bald and golden eagle management guidelines, we recommend you review information provided at the Service's Bald and Golden Eagle Management Library Collection (https://fws.gov/library/collections/bald-and-golden-eagle-management).

NATIVE BATS

If your species list includes Indiana bat (*Myotis sodalis*) or northern long-eared bat (*M. septentrionalis*) and the project is expected to impact forested habitat that is appropriate for maternity colonies of these species, forest clearing should occur outside of the period when bats may be present. Federally listed bats could be actively present in forested landscapes from April 1 to October 15 of any year and have non-volant pups from May 15 to July 31 in any year. Non-volant pups are incapable of flight and are vulnerable to disturbance during that time.

Indiana, northern long-eared, and gray (*M. grisescens*) bats are all known to utilize bridges and culverts in Georgia. If your project includes maintenance, construction, or any other modification or demolition to transportation structures, a qualified individual should complete a survey of these structures for bats and submit your findings via the Georgia Bats in Bridges cell phone application, free on Apple and Android devices. Please include these findings in any biological

assessment(s) or other documentation that is submitted to our office for technical assistance or consultation.

Additional information can be found at Georgia Ecological Services' Conservation Planning Toolbox and Bat Conservation in Georgia pages.

MONARCH BUTTERFLY

On December 20, 2020, the Service determined that listing the Monarch butterfly (*Danaus plexippus*) under the Endangered Species Act is warranted but precluded at this time by higher priority listing actions. With this finding, the monarch butterfly becomes a candidate for listing. The Service will review its status each year until we are able to begin developing a proposal to list the monarch.

As it is a candidate for listing, the Service welcomes conservation measures for this species. Recommended, and voluntary, conservation measures for projects in Georgia can be found at our Monarch Conservation in Georgia (https://www.fws.gov/project/monarch-conservation-georgia) page.

EASTERN INDIGO SNAKE

Our office has published guidance documents to assist project proponents in avoiding and minimizing potential impact to the eastern indigo snake. The Visual Encounter Survey Protocol for the Eastern Indigo Snake (*Drymarchon couperi*) in Georgia is recommended for project proponents or their designees to evaluate the possible presence of the Eastern indigo snake at a proposed project site. The Standard Protection Measures for the Eastern Indigo Snake (*Drymarchon couperi*) include educational materials and training that can help protect the species by making staff working on a project site aware of their presence and traits. In Georgia, indigo snakes are closely associated with the state-listed gopher tortoise (*Gopherus polyphemus*), a reptile that excavates extensive underground burrows that provide the snake shelter from winter cold and summer desiccation.

SOLAR ENERGY DEVELOPMENT

The Georgia Low Impact Solar Siting Tool (LISST) is available as a map layer in IPaC (Find it in the “Layers” Box > “Environmental Data”) and as a web application to provide project managers with the data to identify areas that may be preferred for low impact development. The tool seeks to support the acceleration of large-scale solar development in areas with less impact to the environment.

STATE AGENCY COORDINATION

Additional information that addresses at-risk or high priority natural resources can be found in the State Wildlife Action Plan (https://georgiawildlife.com/WildlifeActionPlan), at Georgia Department of Natural Resources, Wildlife Resources Division Biodiversity Portal (https://georgiawildlife.com/conservation/species-of-concern), Georgia's Natural, Archaeological, and Historic Resources GIS portal (https://www.gnahrgis.org/gnahrgis/index.do), and the Georgia Ecological Services HUC10 Watershed Guidance page.

Thank you for your concern for endangered and threatened species. We appreciate your efforts to identify and avoid impacts to listed and sensitive species in your project area. For further consultation on your proposed activity, please email gaes_assistance@fws.gov and reference the project county and your Service Project Tracking Number.

ENDANGERED SPECIES ACT SPECIES

There is a total of 3 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

PROBABILITY OF PRESENCE SUMMARY

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

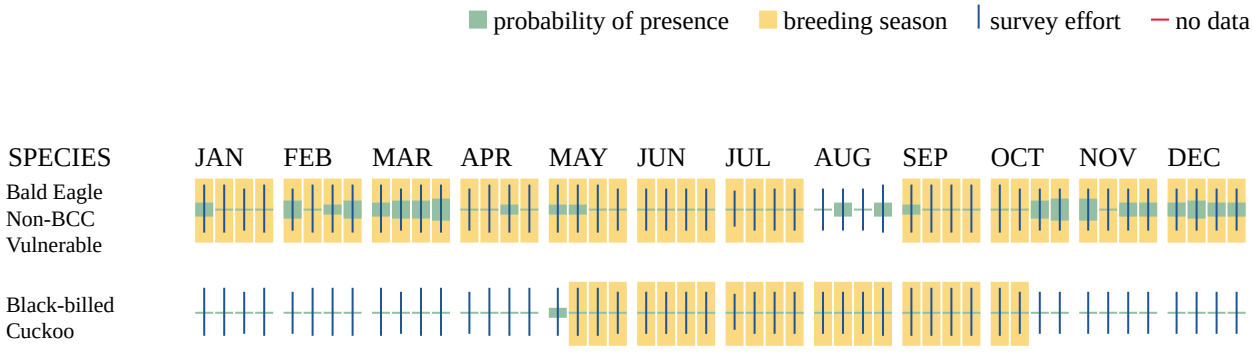

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

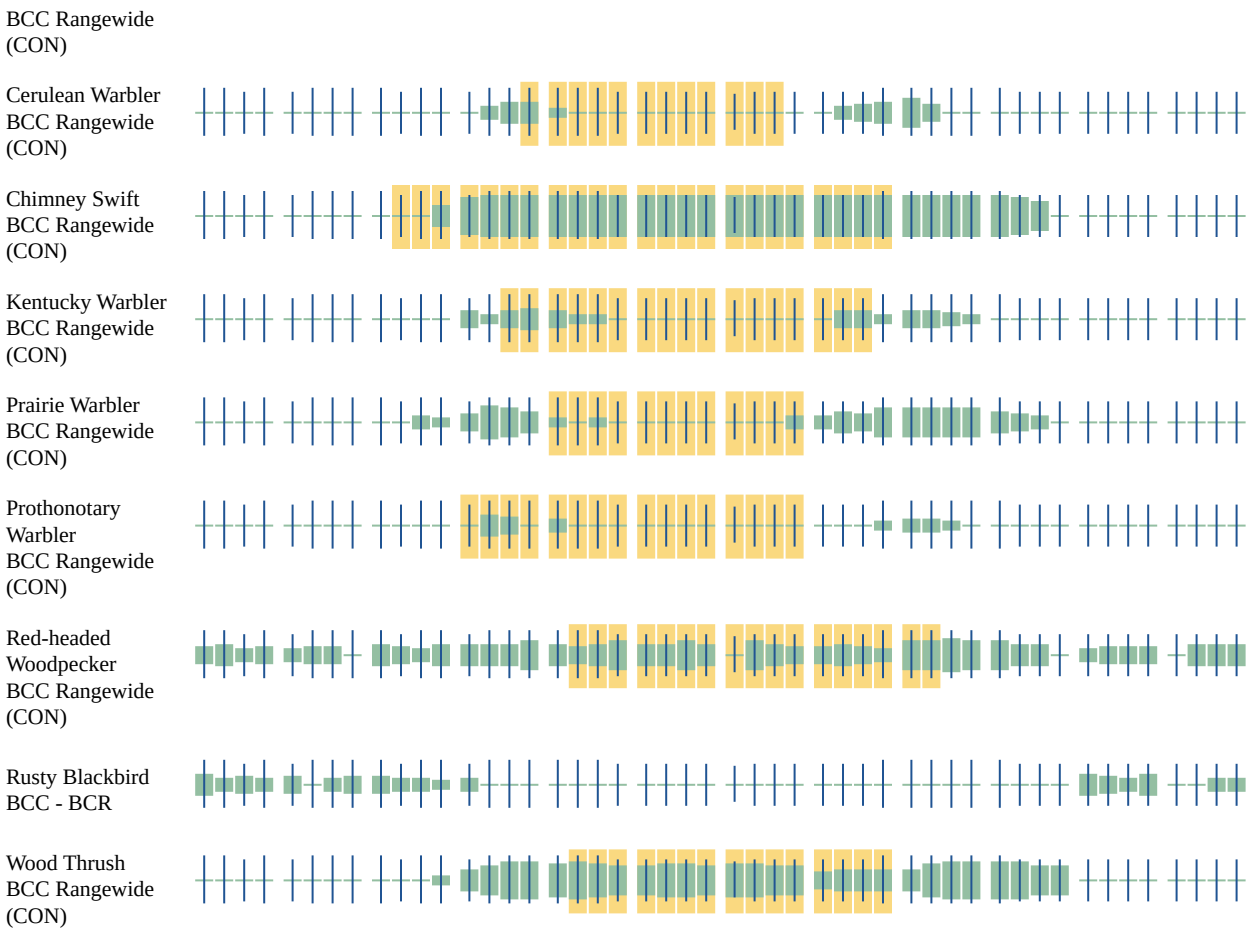

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

MIGRATORY BIRDS FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits

may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?
The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the Rapid Avian Information Locator (RAIL) Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering or migrating in my area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may query your location using the RAIL Tool and look at the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);

2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities,

should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

WETLANDS

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.
