Integrated Communication Networks (ICN), Inc. was established in 1996 in Atlanta, GA. It experienced immediate success while participating in the buildout of the physical layer/LAN cabling facilities and venues for the Atlanta Olympic Games as an ATT SYSTIMAX Partner Pro. The ICN team helped design and install 30,000+ LAN nodes.

The Vision of the company is for ICN's proven success as an industry leading installation services company forms a solid base upon which to provide mobility solutions to meet the challenges of our client base. Its wired and wireless infrastructure experience will be a major asset in the mobility solution required. ICN will be involved in the integration of technology infrastructure to meet the mobility challenges of the client.

ICN has been evaluated as outstanding by its clients through performance feedback and Open Records Report that included 11 companies for which they provided service. Its experience with IBM, PriceWaterhouseCoopers and the State of Georgia proves that they can provide quality service and logistics to multiple locations in a timely efficient manner. Their major client, DeKalb County School District (DCSD) has 130 facilities with over 30,000 connections where they have maintained both wired and wireless infrastructures. The partnership with DCSD proves that ICN can support large infrastructure networks.

Project Portfolio
