State Assessment Results **Hallsville School District** **Mathematics** **10/1/2026**

Bar Charts

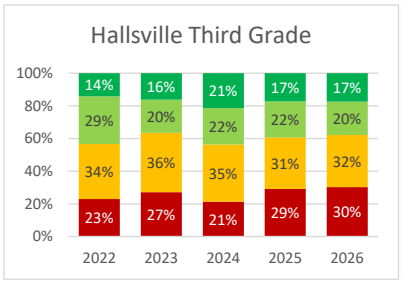

Advanced **Proficient** **Basic** **Below Basic**

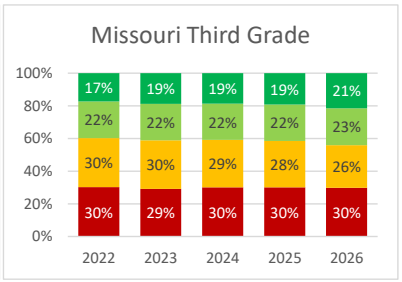

Bar charts provide an overview of how the students fell into the four achievement levels. Percentages are rounded. Longer green bars are better.

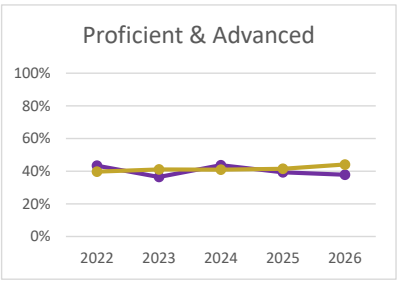

Line Charts Hallsville Missouri

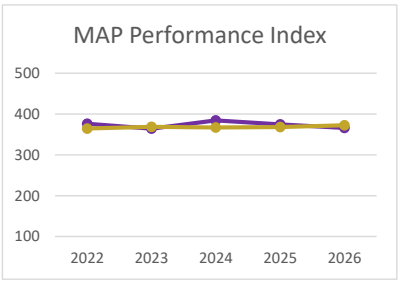

Proficient and Advanced shows the combined percentage of these two achievement levels.

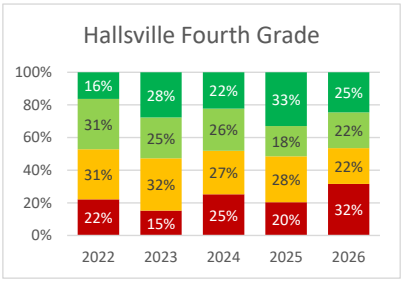

MAP Performance Index (MPI) is the calculation used to determine APR scores. This five-year trend compares our MAP Performance Level Index (MPI) against state benchmarks, where the MPI represents the average academic performance of our students scored on a scale from 1.00 to 5.00 based on their individual assessment achievement levels. Calculated by averaging all student index scores and multiplying by 100, a higher MPI reflects greater overall student proficiency and progress relative to state expectations.
